

TASKFLOW

Project Output Screenshots

Visual evidence of all implemented features

Screenshot 1 Swagger API Documentation

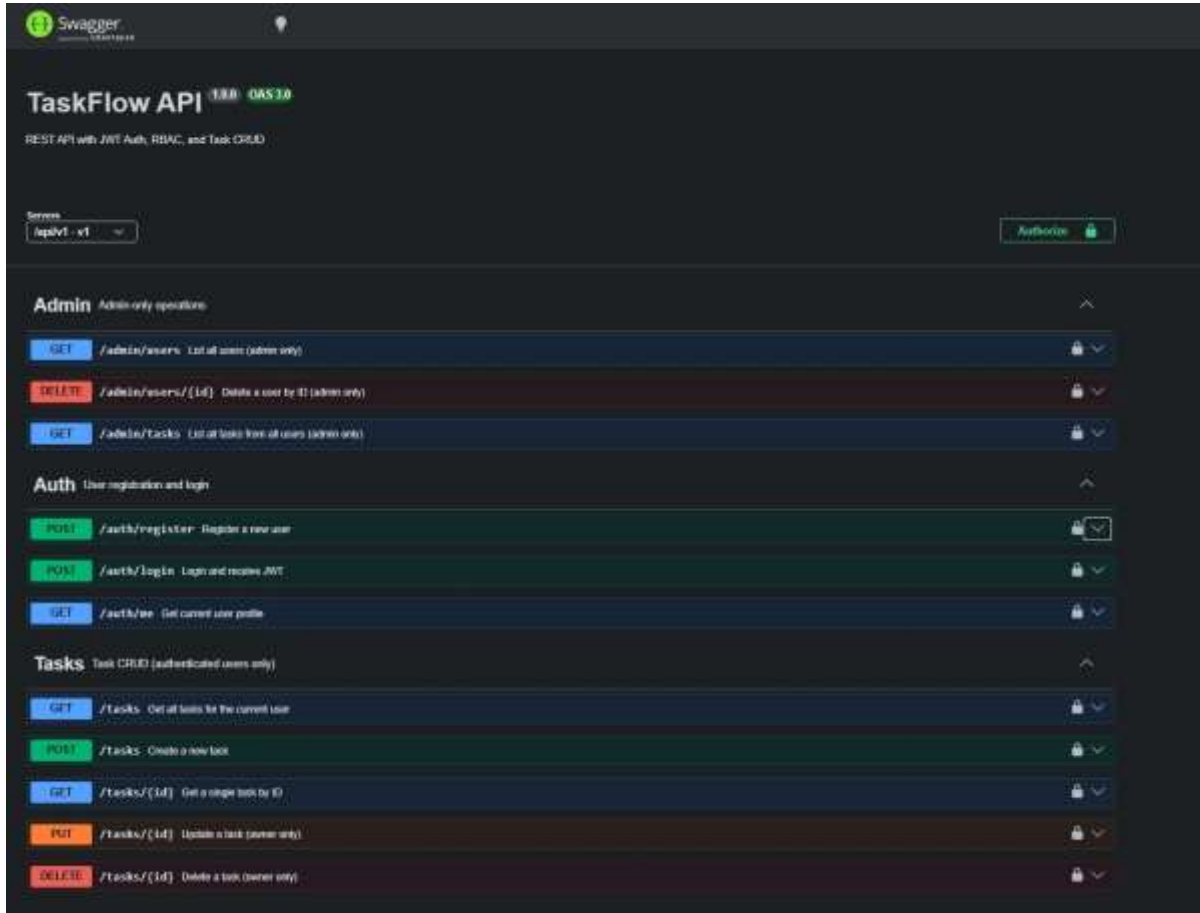

Figure 1: Swagger UI at /api/v1/docs showing all 11 API endpoints across Admin, Auth, and Tasks groups

Screenshot 2 Login Page (Frontend UI)

React frontend authentication interface

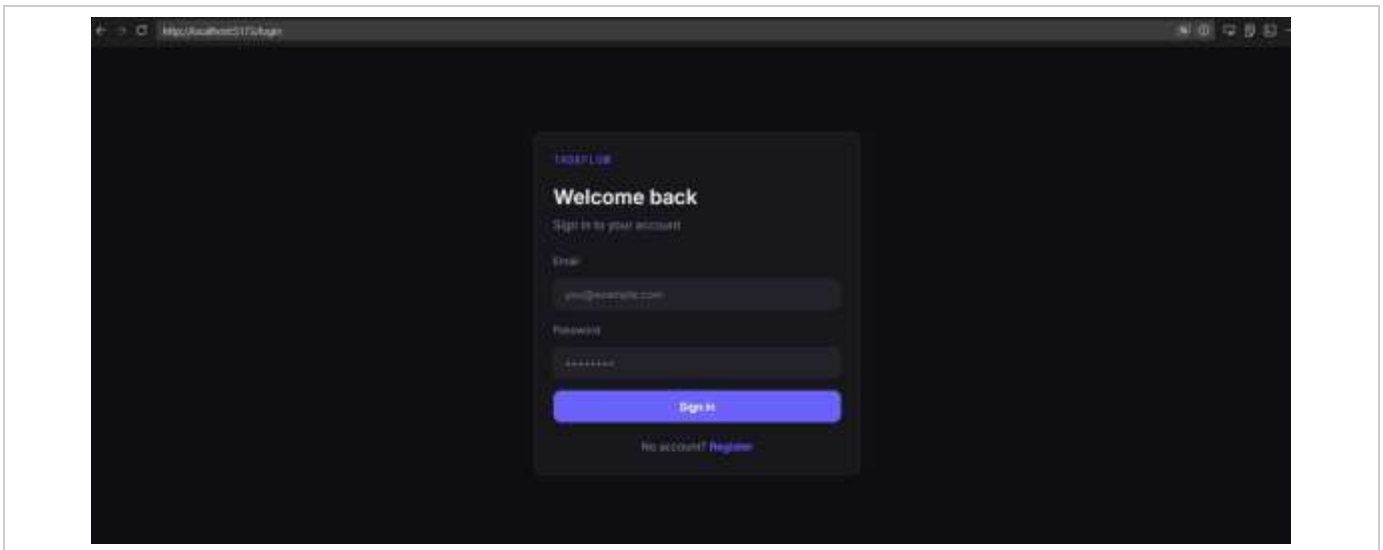

Figure 2: Login page at localhost:5173/login React frontend with JWT-based authentication

Screenshot 3 Dashboard with Task CRUD

What this shows: Protected dashboard with full CRUD functionality

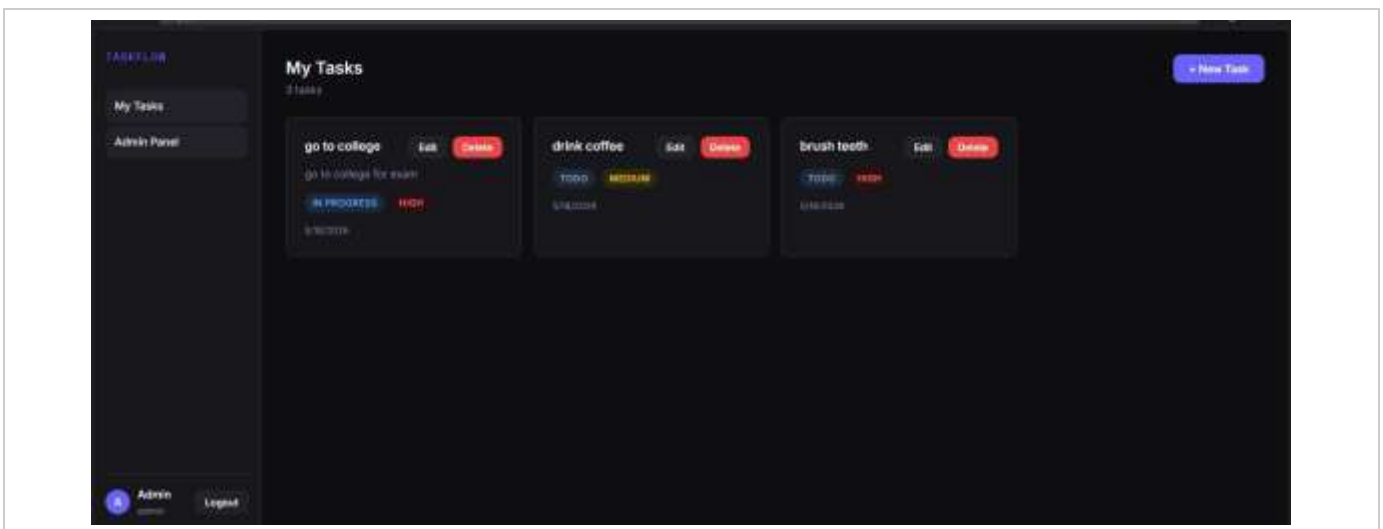

Figure 3: Dashboard at /dashboard task cards with status/priority badges, sidebar with admin navigation

Screenshot 4 Swagger Login API Response (200 OK)

What this shows: Live API response proving authentication works end-to-end

This is the Swagger UI response after executing `POST /api/v1/auth/login` with valid credentials. This screenshot is significant for several reasons:

- Code 200 confirms the endpoint is live, correctly routing, and responding the full backend stack (Express → Service → Sequelize → PostgreSQL) is operational

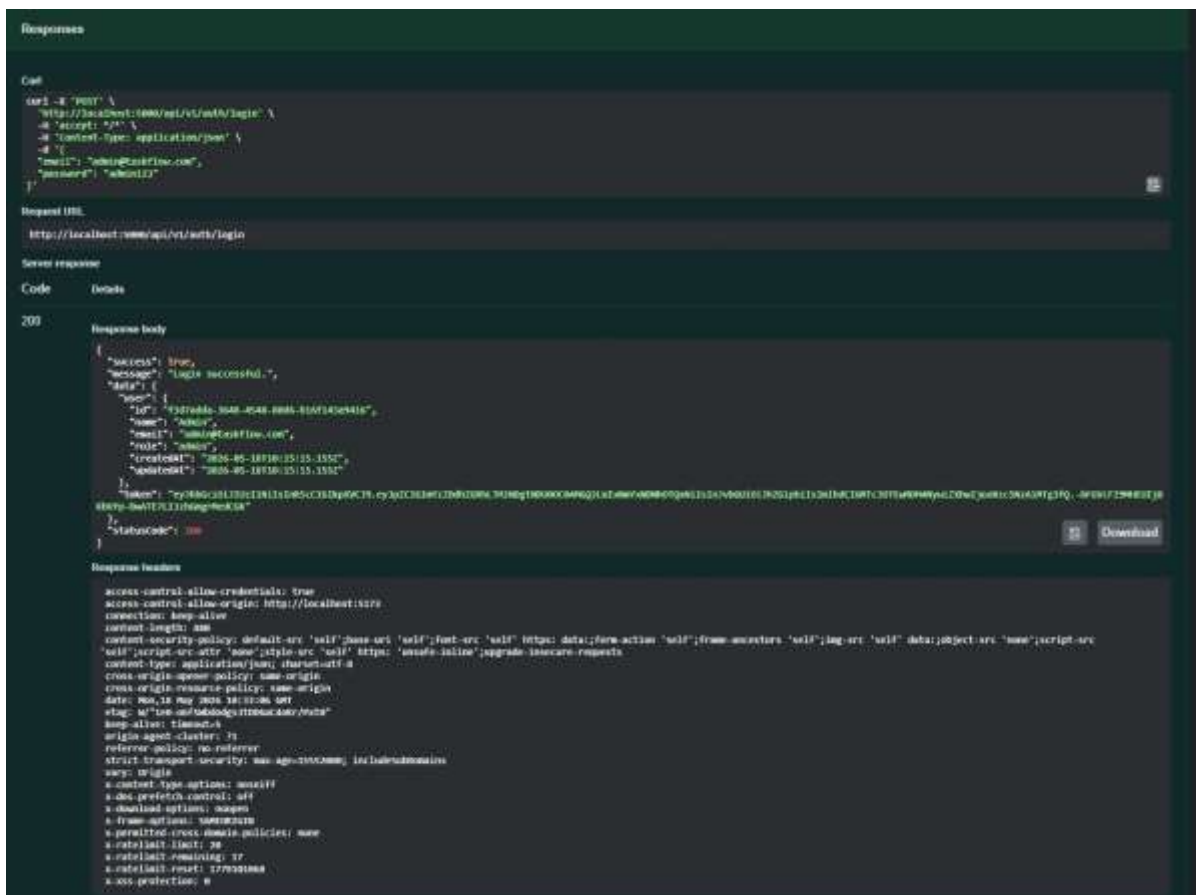

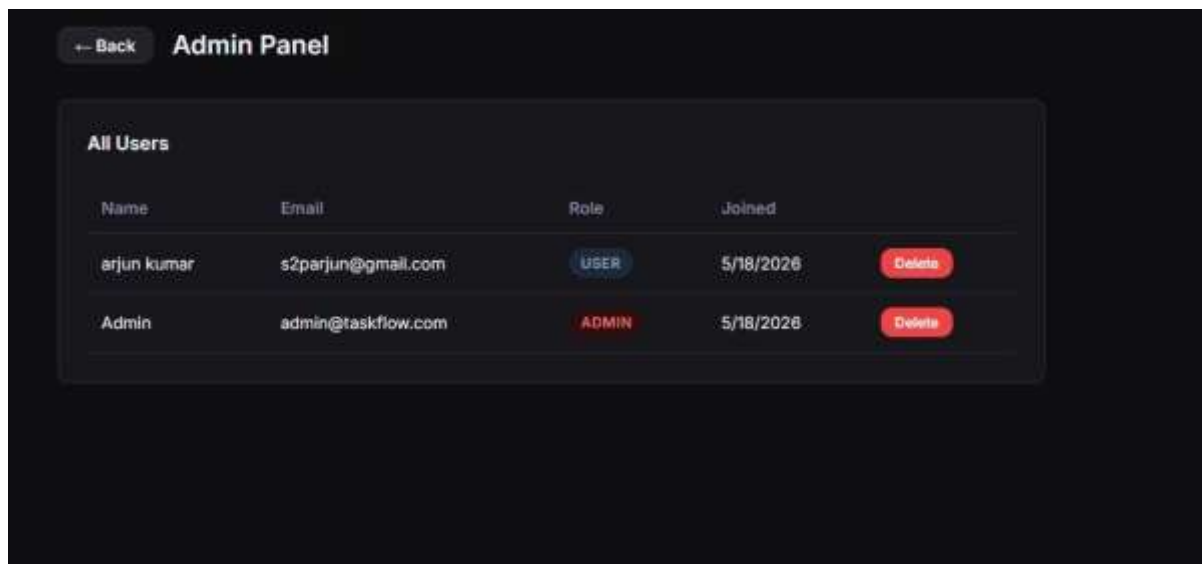

Figure 4: Swagger POST /auth/login response 200 OK with JWT token and Helmet security headers visible

Screenshot 5 Admin Panel (Role-Based Access Control)

What this shows: Admin-only view proving RBAC is fully implemented

This is the Admin Panel at /admin, accessible only to users with role: admin. A regular user attempting to visit this route is redirected to /dashboard by the ProtectedRoute component (adminOnly prop). The panel demonstrates:

- All registered users listed in a table in this case two users: arjun kumar (role: USER) and Admin (role: ADMIN)

The screenshot shows the Admin Panel interface. At the top left, there is a 'Back' button. The main heading is 'Admin Panel'. Below this, there is a section titled 'All Users' containing a table with the following data:

Name	Email	Role	Joined	
arjun kumar	s2parjun@gmail.com	USER	5/18/2026	Delete
Admin	admin@taskflow.com	ADMIN	5/18/2026	Delete

Figure 5: Admin Panel at /admin : user management table with role badges, accessible only to admin-role accounts
